## CAREER OBJECTIVE

Dedicated results-driven junior JavaScript developer, creating front end interface with architectural implementation as comprehensively talented across spectrum of design, development, testing, debugging and documentation application. Good understanding of programming, software engineering lifecycle, and data management for programming and software development using numerous programming languages, related tools, and frameworks to solve clients' business problems.

## EXPERIENCE

### Junior Software Engineer / JavaScript Developer

January 2021 - April 2021 | Alpha Team Hackgon

Created and supported administrative web applications using JavaScript. Analyze code for system testing and debugging, create test transactions to find, isolate, and resolve issues. Implemented best practices to JavaScript codebase, developed new functionality and created new layouts.

### Internship / web Developer

July 2021 - September 2021 | Side-hustle

Completed internship concurrent with education in software engineering and architectural design. Sharing ideas and identifying new platform features and fixes that needed to be implemented, while engaging and supporting the development team in the implementation of such features or fixes.

## EDUCATION

**Obafemi Awolowo University, Bsc Computer Science And Economics — in view**

## PROJECTS

## SKILLS

Bootstrap  
JavaScript  
CSS3  
HTML5  
ReactJs  
TypeScript  
Git

## LANGUAGES

Yoruba  
English

---

## **Bankist Web Application**

- I successfully designed a web banking app platform to factor in well-integrated banking transactions, bridge the gap, and improve transaction speed.
- Implementing proper logic chart for proper functionality and interaction
- Designed with object orientation concept

## **Mapty Web Application**

- Successfully designed and developed tracking exercising application to track users exercising activities and keep a proper tract of users detail.
- Integrating API application to track user coordinate.
- Executing the programming activities and product design consisting of multiple modules and subsystems.
- Developed with a concept of object orientation programming.
- Implemented with software development standards in mind.
